

Island Peak (Imja Tse)

Popularly known as Imja Tse, Island Peak is the most climbing peaks in Nepal. It appears as an island of the icy sea while viewing from Dingbuche and on close inception, it exposes itself to be the most interesting and attractive summit with a highly glaciated west face rising from the Lhotse glacier. Trek to Kala Patthar and Everest base camp is best suitable for acclimatization before proceeding to the climbing on Island Peak.

Summit of Island Peak offers the most amazing panorama of the Himalayas in the entire Everest region. Nuptse (7,879m) Lhotse (8,501m), in the west to Lhotse Middle Peak (8,410m) and Lhotse Shar (8,383m), Makalu (8475m) in the east, Baruntse, and Amadablam in the south are seen. Considering the growing interests in climbing Island Peak is as part of training and preparation for an extensive mountaineering expedition in Nepal as the Island Peak stands for the purpose of acclimatization before heading to bigger mountain climbing.

The normal route for climbing Island Peak is South East Flank & South-West Ridge. Normally, the base camp is set at Pareshaya Gyab (5,087m), between Imja Tse and the lateral moraine of the Imja Glacier. Proper care should be taken to avoid the possible avalanche in the event of heavy snowfall. For some people reaching to the summit from the base camp is a day's activity. However, most of the climbers prefer alpine style camping at high camp which adds the joy of climbing and also helps a safe ascent.
